PROFILE SUMMARY

Entry-level Cybersecurity Professional with a foundation in Mathematics and Computer Science. Skilled in cloud security, SIEM deployment, threat detection and malware analysis with hands-on projects and home-lab deployments. I am also expanding my expertise into offensive and defensive security. Also skilled in problem-solving, team management, attention to detail and collaboration, with proven ability to translate technical findings into actionable insights.

EDUCATION

Kenyatta University, Nairobi

July 2024

Bachelor of Science (Mathematics and Computer Science)

Relevant course work: Networking, Data Structures, Object Oriented Programming, SQL.

EXPERIENCE

Freelancer, Nairobi

March 2023 – September 2024

Data Analyst

- Delivered data analysis services to five clients, including two long-term partnerships, improving decision-making efficiency.
- Designed and maintained interactive Power BI dashboards used by clients for business reporting, reducing manual reporting time by 30%.
- Queried and transformed datasets using SQL, providing insights that led to cost-saving strategies.
- Collaborated with clients to translate business needs into data-driven solutions, enhancing customer satisfaction.

United Nations, Nairobi

March 2024 – April 2024

Volunteer

- Recruited and engaged youth participants for the WFP mentorship program.
- Coordinated communication and logistics for the WFP Mentorship Program, reaching fifty youth participants.
- Supported mentors and mentees, ensuring timely program activities and smooth information flow.

PROJECTS

Python SIEM tool

June 2025

- Developed a custom log monitoring and alerting tool using Python.
- Implemented rules to detect suspicious activity, sending alerts via email/console.
- Visualized attack types and frequency with Matplotlib/Plotly, improving incident visibility.

Honeypot

April 2025

- For deployment, I set up a cloud VM and hardened the host.
- I set up logging and log forwarding to a central location.
- I tracked attacker IPs, commands, tools used, file uploads or brute force attempts and used Python scripts to visualize and analyze the data then summarized attack trends, frequency and common tactics.

Port Scanner

March 2025

- I used Python libraries and built support for TCP connect scan, UDP scan and service banner grabbing.
- I scanned for common ports and added multithreading for faster scanning.
- I ran against local VMs and simulated vulnerable machines for testing purposes.

SKILLS

Programming: Python, SQL, C++

Cybersecurity Tools: SIEM (Wazuh/Elastic), Kali Linux, Wireshark, Burpsuite

Cloud & Platforms: Microsoft Azure, GitHub

Data & Reporting: Power BI, Microsoft Office, Google Docs

Core Competencies: Threat Detection, Incident Response, Vulnerability Management, Malware Analysis, Penetration Testing, Reporting & Documentation

CERTIFICATIONS

CyberShujaa Women's Cybersecurity Bootcamp – Advocacy for women in tech, hands-on cybersecurity training.

Microsoft SC-900: Security, Compliance & Identity Fundamentals – Identity & Access Management, Security Basics.

Cisco Cyber Threat Management – CVSS, Incident Response, Vulnerability Management and Threat Detection.

Cisco Ethical Hacker – Penetration Testing, Vulnerability Scanning, Exploitation and Post Exploitation Techniques.

Growing Leaders Programme – Leadership Development and Mentorship.
